

Power Point

Using PowerPoint: Opening a PowerPoint Presentation & Saving a Presentation

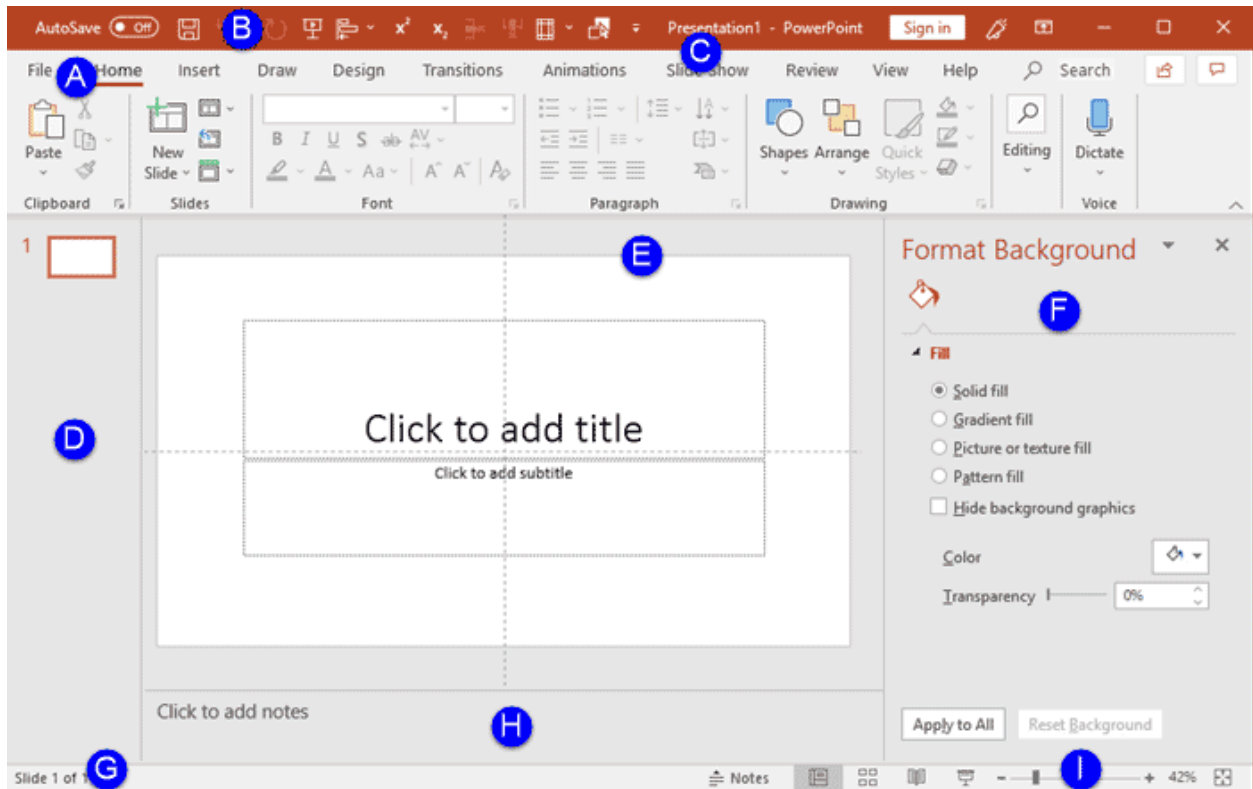

To start:

- Search for "PowerPoint" in the Windows Start menu and open **Microsoft PowerPoint**.
- From the start screen, choose **Blank Presentation** or a template.

Here are examples of the modern PowerPoint interface (Ribbon with tabs like Home, Insert, Design, etc.) and the start screen:

indezine.com

- **Opening an Existing Presentation** → File → Open → Browse (or pick from Recent list).
- **Saving** → Ctrl + S or File → Save (updates the file).
- **Save As** → File → Save As → Choose location/format (default: .pptx).

Creation of Presentation

- **Creating Using a Template** → From start screen, browse templates/themes → Select one → Create.
- **Creating a Blank Presentation** → Start screen → Blank Presentation.

Here are examples of the start screen with template options:

PowerPoint 2013 Start Screen: How to Use It & How to Disable It –

- **Entering and Editing Text** → Click inside a text placeholder → Type. Edit by clicking and typing.
- **Inserting Slides** → Home tab → New Slide (choose layout) or right-click slide thumbnail → New Slide.
- **Deleting Slides** → In slide thumbnails (left pane) → Right-click slide → Delete Slide.

Preparation of Slides

- **Inserting Word Table or Excel Worksheet:**
 - Insert tab → Table → Insert Table (drag or specify rows/columns).
 - Or: Insert → Object → Create from File → Browse to Word/Excel file → OK (embeds or links).
 - Copy-paste from Excel/Word also works well.

Here are examples of inserting and formatting tables from Excel/Word:

PowerPoint: Applying Transitions

These are the core basics to create professional presentations in PowerPoint. Start with a simple 5-10 slide topic (like "My School Project") and practice each step — you'll get comfortable quickly! If you need details on animations, themes, or advanced features, feel free to ask, Sam. 😊
